

MD NUMAN AHMED

Full-Stack Software Engineer · React · Node.js · TypeScript · Cloud Infrastructure · REST & GraphQL APIs
mdnmnahmed@gmail.com | +91 70019 59252 | linkedin.com/in/numan-dev | github.com/num-js | numan-dev.web.app

PROFESSIONAL SUMMARY

Results-driven Full-Stack Software Engineer with 5+ years of experience building dynamic, responsive UIs and robust backend services for enterprise-scale applications used by 1,000+ global organizations. Proficient in React, Angular, TypeScript, Tailwind CSS, and Redux for frontend development, and Node.js, Express.js, REST, GraphQL, and WebSocket APIs for backend services. Experienced in designing and managing NoSQL databases (MongoDB) and integrating cloud infrastructure on AWS using CI/CD pipelines. Proven ability to take ownership of features end-to-end — from requirements to delivery — across distributed, scalable systems. Collaborative team player with a strong Agile mindset, experienced in code reviews, proof-of-concept development, and cross-functional product delivery.

TECHNICAL SKILLS

Frontend: React.js (Hooks, Redux, Component Architecture), Angular, Next.js, Astro, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Shadcn, Material UI, Bootstrap, SCSS

Backend & APIs: Node.js, Express.js, REST APIs, GraphQL, WebSocket APIs, Microservices Architecture

Databases: MongoDB (NoSQL), Redis (familiar), PostgreSQL (familiar), DynamoDB (familiar)

Authentication & Security: OAuth 2.0, JWT (JSON Web Tokens), Secure API Design, Token-Based Authentication

Cloud & DevOps: AWS S3, AWS Chime, Docker (familiar), CI/CD Pipelines, Git / Version Control, Vercel, Sentry

State Management: Redux Toolkit, Zustand, Context API, NGXS, RxJS

Testing & Debugging: React Testing Library, Jest, Cypress.io, Playwright, Cross-Browser Debugging, Browser DevTools

Architecture & Practices: Micro-Frontend (MFE), Full-Stack Application Architecture, Distributed Systems, Agile/Scrum, Code Reviews, CI/CD, Storybook

WORK EXPERIENCE

Senior Software Engineer · Darwinbox

Feb 2022 – Present

Tech Stack: React, Angular, TypeScript, Node.js, Express.js, Redux Toolkit, Zustand, GraphQL, REST APIs, MongoDB, AWS S3, JWT, OAuth, Webpack, Cypress, Storybook, CI/CD, Git, Sentry

- Built and enhanced **full-stack enterprise features** for large-scale HR modules — Recruitment, Payroll, Onboarding, and Talent Intelligence — using React, Angular, TypeScript, and Node.js, taking full ownership from requirements analysis through to deployment, serving **1,000+ global organizations**.
- Developed **robust backend REST and GraphQL APIs** using Node.js and Express.js to serve dynamic, data-heavy frontend modules; implemented JWT-based authentication and OAuth 2.0 flows for secure, scalable access control across distributed services.
- Designed and managed **MongoDB (NoSQL) database schemas** for complex HR data models; optimized query performance through indexing strategies and data aggregation pipelines, contributing to overall application reliability at scale.
- Implemented **Micro-Frontend (MFE) architecture** to decompose the monolithic frontend into independently deployable modules — enabling separate teams to own, develop, and release features without cross-team dependency bottlenecks.
- Reduced application load time by **~80%** through performance profiling, Webpack code splitting, API debouncing, response caching, and Intersection Observer-based lazy loading — directly improving responsiveness for enterprise end-users.
- Coordinated **CI/CD deployment strategies** and participated in release planning; collaborated with product management and engineering teams in an Agile environment through code reviews, design discussions, and sprint ceremonies.
- Implemented and analysed **proof-of-concept solutions** for new product features; proposed and drove adoption of component design systems and idiomatic TypeScript patterns that improved long-term code quality and reduced duplication across teams.

Frontend Engineer II · Wealth42

Aug 2021 – Jan 2022

Tech Stack: React.js, TypeScript, Node.js, Redux Toolkit, Context API, GraphQL, REST APIs, MongoDB, JWT, Recharts, HTML5, CSS3, JavaScript

- Developed a full-stack **Financial Analytics Dashboard** consuming GraphQL and REST APIs via Node.js backend services, with JWT-authenticated data access, functional programming principles, and interactive Recharts visualization for complex financial data.
- Built the **Wealth42.com** web application end-to-end — React frontend with Context API and Redux Toolkit state management, Node.js backend, and MongoDB data layer — reducing development effort by **~60%** through a reusable TypeScript component system.

Tech Stack: React.js, TypeScript, Node.js, Express.js, Redux Toolkit, REST APIs, WebSocket, MongoDB, AWS Chime, AWS S3, OAuth, Git

- Developed a scalable, **distributed real-time video meeting platform** using React, Node.js, and WebSocket APIs, integrated with AWS Chime and AWS S3 cloud services, supporting **100+ concurrent attendees** with stable, low-latency performance across browsers.
- Implemented **OAuth 2.0 and JWT-based authentication** for secure user access management; built a full-stack meeting management dashboard with reusable React components and REST API integration, reducing feature delivery time through shared patterns.

KEY PROJECTS

Struct-UI — Open-Source Reusable Component Library *ui-struct.vercel.app*

Tech Stack: React | TypeScript | Tailwind CSS | Shadcn | Redux | Motion | Storybook | Jest | CI/CD | Vercel

- Architected and published a production-grade **reusable UI component library** in TypeScript with Redux-ready patterns, documented with Storybook, tested with Jest, and deployed via CI/CD on Vercel — ensuring a scalable, consistent design system across distributed application teams.
- Focused on **performance optimization, responsive design, and cross-browser compatibility**, featuring Motion-based animations and adaptive theming — demonstrating end-to-end ownership of a full product lifecycle from concept to open-source release.

AL-Madad Welfare Society — Fund Donation Platform *almadadwelfaresociety.com*

Tech Stack: React | TypeScript | Node.js | Express.js | MongoDB | Zustand | JWT | OAuth | Tailwind CSS | Stripe API | AWS S3 | CI/CD

- Built a full-stack, cloud-deployed web application with **OAuth 2.0 and JWT authentication**, MongoDB data layer, Node.js/Express.js backend, and React frontend — deployed on AWS S3 via CI/CD pipeline for a registered non-profit active across 30+ villages in West Bengal.
- Integrated the **Stripe REST API** with secure, tokenized transaction handling and Zustand-based state management, demonstrating end-to-end full-stack ownership from architecture design to production delivery.

EDUCATION

Bachelor of Computer Applications (BCA)

MAKAUT – George College, Kolkata · DGPA: 8.01 / 10

Aug 2017 – Jul 2020
